SERVING COUNTER TOP

Functional and superbly engineered: the three-zone serving counter top

CONVENIENCE ZONES

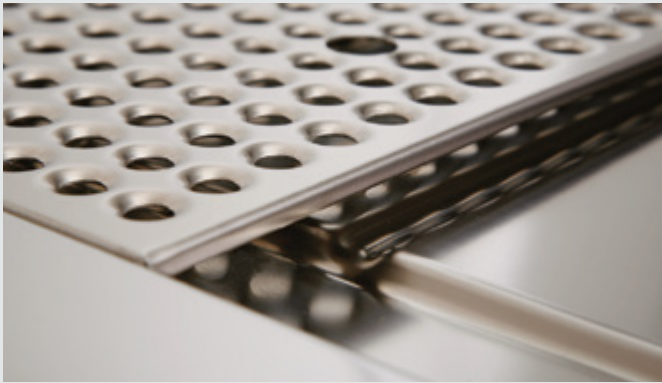

The serving counter top with three zones for greater hygiene and convenience for bar counters.

Dry glass zone

Thanks to the ribbed surface, clean glasses only come into contact with the top surface at just a few points. As a result, clean glasses are stored extremely hygienically.

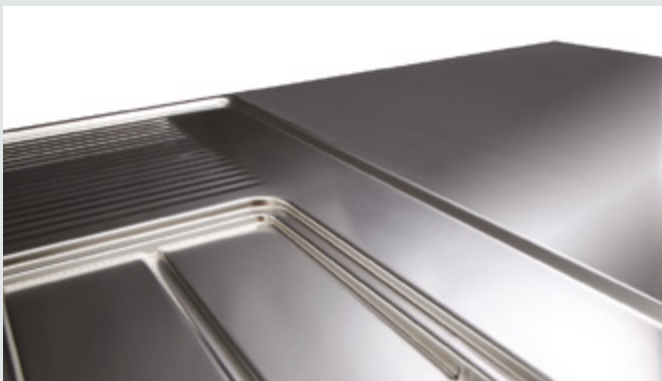

The ribs offer a further advantage over drip supports added at a later stage since there is no difference in level with the work surface.

Pouring zone

The pouring zone is designed as a drip tray, deep-drawn directly into the top surface. The slope in the drain channel ensures liquids instantly flow into the integrated drain. The convex perforated panel placed over the channel forms a level surface with the serving counter top, preventing full glasses from tipping over.

The panels can be simply placed in all commercially available industrial dishwashers for easy cleaning.

Tray zone

With no surrounding beaded edging, the tray zone is flush with the counter surface.

This allows servers to remove trays without needing to raise them. The elevated surface raised above the pouring zone helps to ensure a dry surface, so that the lower face of trays does not get dirty easily.

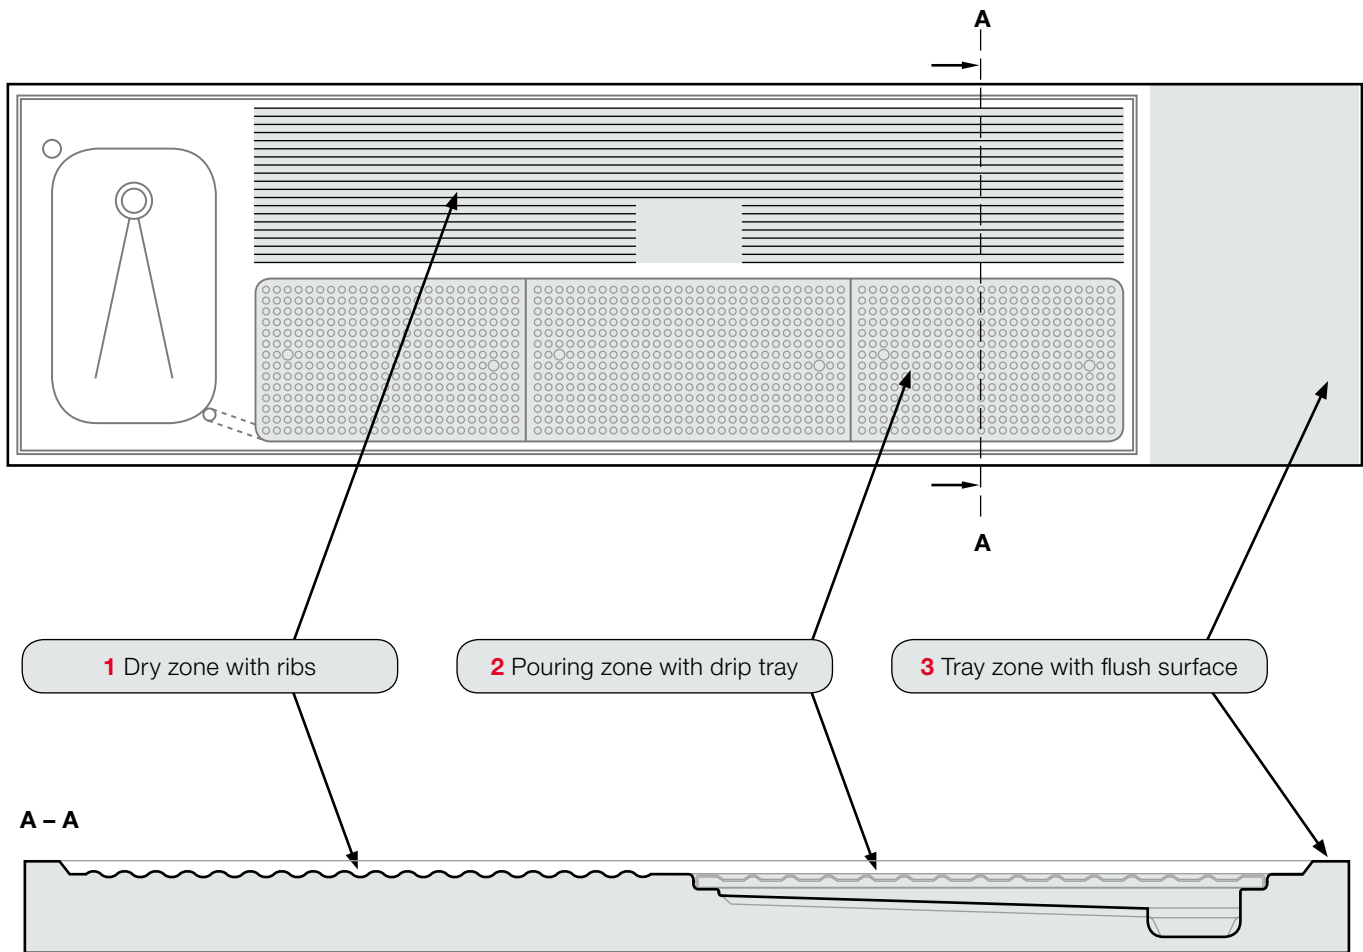

The three levels make it easier to keep things clean.

Cleaning-friendly curves in all recesses thanks to deep-drawing forming process.

3 zones: Dry zone – Pouring zone – Tray zone
